PREFACE

This publication was prepared by personnel of the Water Survey of Canada Division under the direction of the Director, Water Resources Branch, Department of the Environment, Ottawa.

The basic data were collected and compiled under the supervision of Regional Chiefs at Vancouver, British Columbia; Calgary, Alberta; Regina, Saskatchewan; Winnipeg, Manitoba; Guelph, Ontario and Dartmouth, Nova Scotia; the Chief of the Water Quantity and Quality Division at Longueuil, Quebec and Chief, NWT Program, Yellowknife, Northwest Territories

The co-operation received from provincial agencies and from other organizations is gratefully acknowledged.

PRÉFACE

La Division des relevés hydrologiques du Canada, sous l'autorité du Directeur des ressources en eau du ministère de l'Environnement (Ottawa), a préparé la présente publication.

On a recueilli et compilé les données de base sous la compétence des chefs régionaux à Vancouver (Colombie-Britannique), Calgary (Alberta), Regina (Saskatchewan), Winnipeg (Manitoba), Guelph (Ontario) et Dartmouth (Nouvelle-Écosse), ainsi que du Chef des programmes de la quantité et de la qualité de l'eau à Longueuil (Québec), et du Chef des programmes des T.N.-O.).

On remercie vivement les organismes provinciaux ou autres, pour la coopération qu'ils ont apportée.

INTRODUCTION

The Water Resources Branch of the Department of the Environment herein presents the 1991 edition of the Reference Index of Surface Water Data collected to December 31, 1989 by the Water Survey of Canada. This edition supersedes all previous editions.

The Hydrometric Map Supplements are being distributed individually by province(s) when available. These supplements contain two sets of maps at a scale of "one inch equals 32 miles" (1:4 000 000 for the Yukon and Northwest Territories map). One set of maps shows active stations; the other set shows discontinued stations. In addition expanded maps are available for certain areas, as follows:

Province(s)	Expanded Scale
Atlantic Provinces	
Quebec	Montreal Area
Ontario	Toronto Area
Prairie Provinces	Eastern Tributaries to the Milk River Lower Winnipeg River Roseau River Oldman-Belly-St. Mary Rivers
British Columbia	Lower Fraser River Columbia River
Yukon and Northwest Territories	Yukon Territory Mackenzie Delta

INTRODUCTION

La Direction des ressources en eau du ministère de l'Environnement présente l'édition 1991 de l'*Index de référence des données sur les eaux de surface*, données recueillies jusqu'au 31 décembre 1989, par la Division des relevés hydrologiques du Canada. Cette édition annule les éditions antérieures.

Les provinces s'occupent elles-mêmes de la distribution des Suppléments de cartes hydrométriques dès leur publication. Ces suppléments contiennent deux ensembles de cartes à une échelle de «un pouce équivalent à 32 milles» (1:4 000 000 pour la carte du Yukon et des Territoires du Nord-Ouest). Un de ces ensembles montre une station en service, l'autre montre des stations abandonnées. D'autre part, il existe des cartes à plus grande échelle pour certaines régions dont les suivantes :

Province(s)	Plus grande échelle
Provinces de l'Atlantique	
Québec	Région de Montréal
Ontario	Région de Toronto
Provinces des Prairies	Tributaires à l'est de la rivière Milk Rivière Winnipeg (cours inférieur) Rivière Roseau Rivières Oldman-Belly-St. Mary
Colombie-Britannique	Fleuve Fraser (cours inférieur) Rivière Colombia
Yukon et Territoires du Nord-Ouest	Territoire du Yukon Delta du Mackenzie

Details on individual stations and related records, as well as recent data which have not yet been published or indexed may be obtained upon application to one of the following:

ORGANIZATION AND HISTORY OF HYDROMETRIC SURVEY OPERATIONS

Hydrometric surveys are conducted by the Water Survey of Canada under various agreements with the provinces and territories who contributed to the cost of the basic field investigations which were carried out in accordance with mutually agreed-upon plans.

A history of the various arrangements is given in the annual Surface Water Data and Historical Streamflow (Water Levels) Summary publications for each Province.

En s'adressant aux endroits ci-après, on peut obtenir des renseignements supplémentaires sur certaines stations particulières et divers relevés ainsi que des données récentes non encore publiées ou intégrées à l'*Index de référence*.

ORGANISATION ET HISTORIQUE DES RELEVÉS HYDROMÉTRIQUES

La Division des relevés hydrologiques du Canada effectue les relevés hydrométriques, en vertu d'accords divers conclus avec les provinces ou les territoires qui contribuent à payer les coûts des recherches de base effectuées sur le terrain. Les recherches sont fonction d'ententes mutuelles.

On trouvera l'historique des accords dans les publications annuelles des *Données sur les eaux de surface* et du *Sommaire chronologique de l'écoulement (des niveaux d'eau)* de chaque province.

EQUIVALENTS OF MEASURE

The following list of convenient equivalents of measure includes the relationship between imperial units and the International System of Units (SI).

1 inch equals 2.54 cm (centimetres)
1 foot equals 0.3048 m (metre)
1 statute mile equals 1.6093 km (kilometres)

1 cm (centimetre) equals 0.393 70 inch
1 m (metre) equals 3.2808 feet
1 km (kilometre) equals 0.621 37 mile

1 acre equals 43 560 square feet
1 acre equals 0.404 69 ha (hectare)
1 square mile equals 640 acres
1 square mile equals 2.5900 km^2 (square kilometres)
1 square mile equals 259.0 ha (hectares)

1 ha (hectare) equals 10 000 m^2 (square metres)
1 ha (hectare) equals 2.4710 acres
1 km^2 (square kilometre) equals 0.386 10 square mile

1 cubic foot equals 6.2288 imperial gallons
1 imperial gallon equals 4.546 09 L (litres)
1 imperial gallon equals 1.2010 U.S. gallons
1 U.S. gallon equals 0.133 68 cubic foot
1 cubic foot equals 0.028 317 m^3 (cubic metre)
1 m^3 (cubic metre) equals 35.315 cubic feet
1 dam^3 (cubic decametre) equals 1000 m^3 (cubic metres)
1 dam^3 (cubic decametre) equals 1 mm (millimetre) over 1 km^2 (square kilometre)

1 cubic foot per second for one day equals 1.9835 acre-feet
1 cubic foot per second for one day covers one square mile to a depth of 0.037 19 inch
1 acre-foot equals 1.2335 dam^3 (cubic decametres)
1 m^3/s (cubic metre per second) for one day equals 86.4 dam^3 (cubic decametre)
1 m^3/s (cubic metre per second) for one day covers one square kilometre to a depth of 0.0864 m (metre)

1 foot per second equals 0.6818 mile per hour
1 mile per hour equals 1.467 feet per second
1 m/s (metre per second) equals 3.6 km/h (kilometre per hour)
1 km/h (kilometre per hour) equals 0.2778 m/s (metre per second)

1 cubic foot per second equals 0.028 317 m^3/s (cubic metre per second)
1 m^3/s (cubic metre per second) equals 35.315 cubic feet per second

1 pound equals 0.453 59 kg (kilogram)
1 kg (kilogram) equals 2.2046 pounds

1 short ton (2000 pounds) equals 0.907 18 t (tonne)
1 t (tonne) equals 2204.6 pounds

degrees Celsius = 5/9 (degrees Fahrenheit − 32)
degrees Fahrenheit = 9/5 (degrees Celsius) + 32

ÉQUIVALENCES DES UNITÉS DE MESURE

Voici une liste des unités de mesure impériales et leurs équivalences dans le Système international d'unités (SI).

1 pouce vaut 2.54 cm (centimètres)
1 pied vaut 0.3048 m (mètre)
1 mille terrestre vaut 1.6093 km (kilomètre)

1 cm (centimètre) vaut 0.393 70 pouce
1 m (mètre) vaut 3.2808 pieds
1 km (kilomètre) vaut 0.621 37 mille

1 acre vaut 43 560 pieds carrés
1 acre vaut 0.404 69 ha (hectare)
1 mille carré vaut 640 acres
1 mille carré vaut 2.5900 km^2 (kilomètres carrés)
1 mille carré vaut 259.0 ha (hectares)

1 ha (hectare) vaut 10 000 m^2 (mètres carrés)
1 ha (hectare) vaut 2.4710 acres
1 km^2 (kilomètre carré) vaut 0.386 10 mille carré

1 pied cube vaut 6.2288 gallons impériaux
1 gallon impérial vaut 4.546 09 L (litres)
1 gallon impérial vaut 1.2010 gallon américain
1 gallon américain vaut 0.133 68 pied cube
1 pied cube vaut 0.028 317 m^3 (mètre cube)
1 m^3 (mètre cube) vaut 35.315 pieds cubes
1 dam^3 (décamètre cube) vaut 1000 m^3 (mètres cubes)
1 dam^3 (décamètre cube) vaut 1 mm (millimètre) qui couvre 1 km^2 (kilomètre carré)

1 pied cube par seconde pendant un jour vaut 1.9835 acre-pied
1 pied cube par seconde pendant un jour couvre un volume d'un mille carré par 0.037 19 pouce
1 acre-pied vaut 1.2335 dam^3 (décamètre cube)
1 m^3/s (mètre cube par seconde) pour un jour vaut 86.4 dam^3 (décamètres cubes)
1 m^3/s (mètre cube par seconde) pour un jour couvre un kilomètre carré à une profondeur de 0.0864 m (mètre)

1 pied par seconde vaut 0.6818 mille par heure
1 mille par heure vaut 1.467 pied par seconde
1 m/s (mètre par seconde) vaut 3.6 km/h (kilomètres par heure)
1 km/h (kilomètre par heure) vaut 0.2778 m/s (mètre par seconde)

1 pied cube par seconde vaut 0.028 317 m^3/s (mètre cube par seconde)
1 m^3/s (mètre cube par seconde) vaut 35.315 pieds cubes par seconde

1 livre vaut 0.453 59 kg (kilogramme)
1 kg (kilogramme) vaut 2.2046 livres

1 tonne courte (2000 livres) vaut 0.907 18 t (tonne)
1 t (tonne) vaut 2204.6 livres

degrés Celsius = 5/9 (degrés Fahrenheit − 32)
degrés Fahrenheit = 9/5 (degrés Celsius) + 32

CO–OPERATION AND ACKNOWLEDGMENTS

Co-operative undertakings with other agencies form an important part of the activities of the Water Survey of Canada. Close co-operation has been maintained with public agencies and private organizations concerned with water resources. Runoff and other data have been mutually exchanged and stream-gauging operations have been facilitated by the assistance received from a number of organizations.

On waters adjacent to the International Boundary, certain gauging stations are maintained by Canada (or the United States) under agreement with the United States (or Canada) and the records are collected and compiled in a manner equally acceptable to both countries. These stations are designated as "International Gauging Stations".

For the valuable assistance and co-operation received in obtaining hydrometric survey records, the Water Survey of Canada is indebted to many organizations. The names of these organizations are given in the annual Surface Water Data publications and those who contributed data are listed on page xii herein.

DEFINITION OF TERMS AND ABBREVIATIONS

"Control" is the condition downstream from a gauging station that determines the stage-discharge relationship. It may be a stretch of rapids, a weir or other artificial structure. In the absence of such features, the control may be a less obvious condition such as a convergence of the channel or even simply the resistance to flow through a downstream reach. A shifting control exists where the stage-discharge relationship tends to change because of impermanent bed or banks.

"Cubic metres per second" (m^3/s) is a unit expressing rate of discharge. One cubic metre per second is equal to one cubic metre of water flowing past a particular point in one second. This is the basic unit in general use, other units being computed from it by the use of factors as given in the previous paragraph under "Conversion Factors".

"Gauging station" is a location where systematic records of stage or stage and discharge are obtained.

"Miscellaneous (or related) data" is all data not published in the regular series of hydrometric and sediment data publications such as unpublished water levels and the various parameters that are measured in obtaining discharge measurements, e.g. water depth, velocity, width, air and water temperatures, ice thickness. This also includes discharge measurements and water level and sediment observations obtained at locations which are not regular gauging stations. Various types of "derived" data could also be considered "miscellaneous", such as water levels and discharges at selected time intervals (usually hourly).

"Stage-discharge relationship" is the relation between the water level and the discharge at a gauging station.

COOPÉRATION ET REMERCIEMENTS

Le travail entrepris en coopération avec d'autres organismes représente une partie importante des activités de la Division des relevés hydrologiques du Canada. On a maintenu une étroite collaboration avec les organismes, publics ou privés, qui s'intéressent aux ressources en eau. On a échangé des données portant sur l'écoulement ou sur d'autres points, et l'assistance fournie par beaucoup d'organismes a facilité les opérations de jaugeage.

Pour ce qui est des eaux adjacentes à la frontière internationale, certaines stations de jaugeage dépendent du Canada (ou des États-Unis) suite à un accord avec les États-Unis (ou le Canada), et les relevés sont faits et compilés de façon à satisfaire les deux pays. Ces stations sont nommées «Stations internationales de jaugeage».

La Division des relevés hydrologiques du Canada est redevable à plusieurs organismes de l'aide et de la collaboration qu'ils lui ont apportées lors de la prise des relevés hydrométriques. On trouvera les noms des organismes dans les publications annuelles des *Données sur les eaux de surface*; les noms des organismes qui ont fourni des données apparaissent à la page xii de la présente publication.

DÉFINITIONS DES TERMES ET ABRÉVIATIONS

«Élément régulateur» – élément qui conditionne l'écoulement en aval d'une station de jaugeage et qui détermine la relation hauteur-débit au niveau de la station. Ce peut être une série de rapides, un déversoir ou toute autre structure artificielle. En l'absence de ces structures, l'élément régulateur peut provenir d'une condition moins apparente comme le rétrécissement d'un chenal ou simplement la résistance à l'écoulement d'un tronçon situé en aval. Il y a élément régulateur changeant quand la relation hauteur-débit tend à être modifiée par un lit ou des rives instables.

«Mètres cubes par seconde» (m^3/s) – unité du taux d'écoulement. Un mètre cube par seconde équivaut à un mètre cube d'eau s'écoulant en un point donné en une seconde. C'est l'unité de base généralement employée, les autres unités dérivées à partir de celle-ci sont données sous la rubrique «Facteurs de conversion».

«Station de jaugeage» – lieu où l'on effectue des relevés systématiques de la hauteur ou de la hauteur et du débit de l'eau.

«Les données diverses (ou connexes)» – représentent toutes les données qui ne sont pas publiées dans les séries régulières des publications sur les données hydrométriques et les sédiments, par exemple celles des niveaux des eaux et des autres paramètres qui sont mesurés en même temps que le débit, soit la profondeur de l'eau, sa vitesse, son étendue, la température de l'eau et de l'air, l'épaisseur de la glace. Les mesures de débit ainsi que les observations sur les niveaux des eaux et les sédiments, obtenues à des emplacements autres que les stations régulières de jaugeage, sont aussi incluses. D'autres types de données «dérivées» pourraient aussi être classées dans cette catégorie de données «diverses», à savoir les niveaux des eaux et les débits observés à des intervalles de temps précis (en général, toutes les heures).

«Relation hauteur-débit» – relation qui existe entre la hauteur et le débit au niveau d'une station de jaugeage.

PUBLICATION OF SURFACE WATER AND SEDIMENT DATA

Surface Water Data have been published in a variety of formats in imperial units since 1908 in approximately 300 publications which are now mostly out-of-print. Commencing with the 1979 publications, data are presented in the International System of Units (SI). However, the format has remained the same wherein Canada is divided into eight regions. The provinces each represent a separate region except for New Brunswick, Newfoundland, Nova Scotia and Prince Edward Island which together form the Atlantic Provinces region, and the Yukon and Northwest Territories which make up another. The publications are identified by the province(s) or territories covered and the year in which data were collected. These data are published annually on a calendar-year basis and the stations are listed alphabetically, with two years of data per page.

The first edition of a *Surface Water Data Reference Index* was published for data to 1966 by province or region. Subsequent editions were published annually or biennially in one publication for Canada. Commencing with the 1979 publication, data are presented in the International System of Units (SI) and future editions will be published biennially. Gauging stations are listed by province or territory, in upstream to downstream order.

The first edition of a publication series titled *Historical Streamflow Summary* was produced for data to 1970. Subsequent editions have been published every three years. This publication series contains a summary of historical monthly and annual mean discharges and annual extremes for the entire period of record for all stations where streamflow data have been collected during the history of the Water Survey of Canada. Data are published by province or region, as for the annual Surface Water Data publications. Commencing with the 1979 publications, data are presented in the International System of Units (SI). Editions subsequent to 1982 will be published every two years. The latest edition supersedes all previous editions since it contains any corrections or additions since the last publication.

The first edition of a publication series titled *Historical Water Levels Summary* was produced for data to 1976. This publication series contains a summary of historical monthly and annual mean water levels and annual extremes for the period of record to 1976 for all stations on lakes or reservoirs where water level data have been collected during the history of the Water Survey of Canada. It also contains a summary of water level data for all stations on rivers where "water levels only" were collected or for certain stations on rivers where streamflow data are collected, but the historical water level information is considered to be of sufficient demand to warrant inclusion in the publication (daily water levels for stations where streamflow data are collected are not normally published in the annual Surface Water Data publications). Data are published by province or region, as for the annual Surface Water Data publications. Commencing with the 1979 publications, data are presented in the International System of Units (SI). Editions subsequent to 1982 will be published every two years. The latest edition supersedes all previous editions since it contains any corrections or additions since the last publication.

PUBLICATION DES DONNÉES SUR LES EAUX DE SURFACE ET LES SÉDIMENTS

Depuis 1908, les *Données sur les eaux de surface* ont été publiées, en utilisant diverses formules et en ayant recours au système d'unités impériales, dans quelque 300 publications lesquelles sont pour la plupart épuisées. À partir de 1979, les données sont fournies dans le Système international d'unités (SI). Toutefois, la présentation est toujours la même, c'est-à-dire que le Canada est divisé en huit régions. Chaque province représente une région distincte sauf le Nouveau-Brunswick, Terre-Neuve, la Nouvelle-Écosse et l'Île du Prince-Édouard qui constituent la région des provinces de l'Atlantique, comme c'est le cas aussi pour le Yukon et les Territoires du Nord-Ouest qui sont réunis en une seule région. Les publications sont identifiées par le nom des provinces ou territoires concernés et par l'année de la cueillette des données. Les données sont publiées annuellement, en fonction de l'année civile, et les stations sont classées par ordre alphabétique, chaque page de données couvrant deux années.

La première édition de l'*Index de référence des données sur les eaux de surface* comprenait les données disponibles jusqu'en 1966, de chaque province ou région. Les éditions subséquentes étaient publiées annuellement ou tous les deux ans en une seule publication pour tout le Canada. À partir de 1979, les données sont fournies dans le Système international d'unités (SI) et les éditions subséquentes vont paraître tous les deux ans. Les stations de jaugeage sont présentées par province ou territoire et placées dans l'ordre de leur position, d'amont en aval.

La première édition d'une série de publications intitulée *Sommaire chronologique de l'écoulement* renfermait les données disponibles jusqu'en 1970. Les éditions subséquentes étaient publiées tous les trois ans. Cette série de publications renferme un résumé des moyennes mensuelles et annuelles des débits ainsi que les débits extrêmes annuels pour toute la période d'enregistrement et pour toutes les stations où des données de débit sont recueillies par la Division des relevés hydrologiques du Canada. Les données sont publiées par province ou région, comme c'est le cas pour les publications annuelles des données sur les eaux de surface. À partir de 1979, les données sont fournies dans le Système international d'unités (SI). Les éditions subséquentes à 1982 vont paraître tous les deux ans. L'édition la plus récente annule toutes les éditions antérieures, car elle renferme toutes les corrections et mises à jour depuis la dernière parution.

La première édition d'une série de publications intitulée *Sommaire chronologique des niveaux d'eau* comprenait les données disponibles jusqu'en 1976. Cette série de publications contient un résumé des niveaux moyens mensuels et annuels ainsi que des niveaux extrêmes annuels pour la période d'enregistrement allant jusqu'en 1976, pour toutes les stations de lacs ou de réservoirs où des données sur les niveaux d'eau sont recueillies par la Division des relevés hydrologiques du Canada. Elle renferme également un résumé des niveaux d'eau pour toutes les stations de rivières effectuant «uniquement» des relevés de niveaux d'eau ou pour certaines stations de rivières où des données de débit sont recueillies de même que des données sur les niveaux d'eau qui peuvent répondre aux besoins des utilisateurs (en général, les niveaux d'eau quotidiens de stations effectuant des relevés de débit ne sont pas publiées dans les publications annuelles des données sur les eaux de surface). Les données sont publiées par province ou région, comme c'est le cas pour les publications annuelles des données sur les eaux de surface. À partir de 1979, les données sont fournies dans le Système international d'unités (SI). Les éditions subséquentes à 1982 vont paraître tous les deux ans. L'édition la plus récente annule toutes les éditions antérieures, car elle renferme toutes les corrections et mises à jour depuis la dernière parution.

During the years 1948 to 1960, some sediment data were collected for several Prairie rivers to meet the needs of particular projects. The first Water Resources Paper series containing sediment data incorporated a selection of these data and also data for part of the year ending September 30, 1961, at stations established for the continuing program. The second issue was a biennial publication covering only the continuing program for the 1962 and 1963 water years. All subsequent editions titled *Sediment Data Canadian Rivers* have been published annually. The sediment data since 1978 have been presented entirely in the International System of Units (SI).

Commencing with 1984, the *Sediment Data* are presented and published in a new format wherein Canada is divided into eight regions. The provinces each represent a separate region except for New Brunswick, Newfoundland, Nova Scotia and Prince Edward Island, which together form the Atlantic Provinces region, and the Yukon and Northwest Territories which make up another. The publications are identified by the province or territories covered and the year in which the data were collected. These data are published annually on a calendar-year basis and the stations are listed alphabetically.

The first edition of a *Sediment Data Reference Index* was published for data to 1972. It contains a tabulation of locations in Canada where sediment data were collected by the Water Survey of Canada. The index has been subdivided alphabetically by province or territory, with sediment survey stations also listed alphabetically. Commencing with the 1978 publication, data are presented in the International System of Units (SI) and will continue to be published biennially. The latest edition supersedes all previous editions because it contains any corrections or additions since the last publication.

The first edition of a new publication series titled *Historical Sediment Data Summary for Canadian Rivers* was produced for data to 1974. This publication contains a summary of historical monthly and annual mean suspended sediment load, and annual extremes of daily suspended sediment concentration and loads and total annual suspended load. Commencing with the 1978 publication, data are presented entirely in the International System of Units (SI). This publication has been discontinued, as much of the information is now included in the new annual *Sediment Data* publication.

EXPLANATION OF REFERENCE INDEX PUBLICATION

The main body of this Index is a tabulation of stations showing station number and name, drainage area, gauge location, discharge records, type of gauge, operation schedule, and remarks. The names of rivers and lakes for which data are available are given in a station number index and an alphabetical index.

The headings for the main tabulation are shown in English in this Index, with a detailed explanation of their meaning in both English and French in the following paragraphs. The Quebec portion of the Reference Index with French headings is also included in the Quebec Surface Water Data publication.

De 1948 à 1960, on a recueilli des données pour plusieurs cours d'eau des Prairies en prévision de la réalisation de certains projets. La première publication contenant des données sur les sédiments a paru dans la série intitulée *Water Resources Paper*; elle présentait un choix de ces données ainsi que des données recueillies en 1961 avant le 30 septembre à des stations établies pour la réalisation du programme permanent. La deuxième publication a porté sur les données recueillies dans le cadre du programme au cours des années hydrologiques 1962 et 1963. Par la suite, les données ont été publiées annuellement sous le titre *Données sur les sédiments – rivières canadiennes*. Depuis 1978, les données sont exprimées en unités du Système international (SI).

En 1984, la présentation des *Données sur les sédiments* est modifiée et publiée. Le Canada est divisé en huit régions, une région pour chaque province, sauf le Nouveau-Brunswick, Terre-Neuve, la Nouvelle-Écosse et l'Île-du-Prince-Édouard qui, ensemble, forment la région des provinces de l'Atlantique, et les Territoires du Yukon et du Nord-Ouest, qui forment une autre région. Les publications sont nommées selon la région couverte et l'année des données (année civile). Ces publications sont annuelles. Les stations y sont présentées par ordre alphabétique.

Un *Index de référence des données sur les sédiments* est publié. La première édition portait sur les données disponibles jusqu'en 1972. Les emplacements où des données sur les sédiments ont été recueillies au Canada par la Division des relevés hydrologiques y sont présentés sous forme de tableau. L'*Index* est subdivisé selon l'ordre alphabétique par province ou territoire, et les stations de mesure des sédiments sont classées par ordre alphabétique. À partir de 1978, les données sont exprimées en unités du Système international (SI). L'*Index* est publié tous les deux ans; l'édition la plus récente annule toutes les éditions antérieures, car elle renferme toutes les corrections et mises à jour effectuées depuis la dernière parution.

Une autre série de publications a porté le titre *Sommaire chronologique des données sur les sédiments de rivières canadiennes*. La première édition renfermait les données disponibles jusqu'en 1974. Cette série présentait un résumé donnant les moyennes mensuelles et annuelles historiques du débit des sédiments en suspension, les valeurs annuelles extrêmes de la concentration journalière et du débit journalier des sédiments en suspension et le débit annuel total des sédiments en suspension. À partir de 1978, les données ont été présentées en unités du Système international (SI). Cette série a été abandonnée, car une bonne partie de l'information est maintenant contenue dans la nouvelle publication annuelle intitulée *Données sur les sédiments*.

EXPLICATION DE L'*INDEX DE RÉFÉRENCE*

L'*Index de référence* est surtout constitué de tables indiquant les numéros et les noms de stations, la superficie des bassins versants, l'emplacement des jauges, les relevés de débit, le type de jauges, le mode d'utilisation et des remarques. Les noms des cours d'eau et des lacs pour lesquels des données sont disponibles figurent dans un index numérique des stations et dans un index alphabétique.

Les titres de la table principale sont indiqués en anglais dans cet index, et les paragraphes qui suivent contiennent une explication complète de ces titres (en français et en anglais). La section de l'*Index de référence* qui se rapporte au Québec et qui contient des titres français est aussi incluse dans la publication *Données sur les eaux de surface-Québec*.

This Index has been subdivided alphabetically by province or territory. Within each such geographic subdivision, the stations are listed in stream order beginning with the most upstream station and extending to the most downstream station. All stations on the main stem are listed first; these are followed by stations in the drainage basin of the most upstream tributary. Stations in the drainage basin of the next downstream tributary are then listed; this is continued until all tributaries have been covered. The names of tributaries of the main stem are indented and the indentation indicated by one period; tributaries to these tributaries are further indented using two periods, etc. This system enables rivers of the same drainage basin to be selected at a glance. The user is advised, however, that in the case of some large river systems, such as the Saskatchewan River, reference will have to be made to various sections of this Index.

Explanations for each heading in the main tabulation are given as follows:

Station No.:

Each gauging station has been assigned a unique seven-character identification. The station numbering system begins with the division of Canada into eleven major groups of river basins. These divisions are subdivided following heights of land within the division with a letter assigned to each subdivision. Each subdivision is further divided on drainage basin boundaries and assigned a second letter, e.g. 5BD. Stations in this sub-subdivision are then assigned further numbers in chronological order of their establishment, independent of their stream order. Thus, using the seven-character identification system, 05BD007 is the seventh station established in sub-subdivision 5BD; 11AA033 is the thirty-third station established in sub-subdivision 11AA, and so on. An index in order of station number is given herein.

Name:

Each station has been given a name which is used for identification and publication purposes. Former names which were used are not shown in this Index.

Drainage Area:

The latest available drainage area in square kilometres is given for streamflow stations. In most cases this is the drainage area upstream from the gauge location. Usually the gauge location is adjacent to the discharge measurement section and the same drainage area may be used for both. For a gauging station on a lake, this refers to the total drainage area at the outlet of the lake.

Gauge Location:

The location of the gauge is given in terms of the coordinates of latitude and longitude. A more detailed description of the location is available from the Regional Office responsible for the operation of the station. In the case of the three prairie provinces, the legal land description is also given for the quarter section in which the gauge is located. This land description locates the gauge within a square whose sides measure one-half of a mile. Space limitations have necessitated the use of an abbreviation of the description, thus: SW22-05-08-W4 is in the southwest quarter section 22, township 5, range 8, west of the fourth meridian.

Les provinces ou les territoires sont indiqués par ordre alphabétique. Les stations de chacune de ces divisions géographiques sont placées dans l'ordre de leurs positions sur le cours d'eau, d'amont en aval. Toutes les stations du cours principal sont données en premier, suivies par les stations du bassin versant installées sur le tributaire le plus en amont. Viennent ensuite les stations des autres tributaires situés plus en aval, d'après le cours d'eau principal. Les noms des tributaires du cours principal sont déplacés vers la droite et l'espace est marqué d'un point, les noms des tributaires de ces tributaires sont encore plus à la droite, et l'espace est marqué de deux points, etc. Cette méthode permet de trouver très facilement tous les cours d'eau d'un même bassin versant. L'utilisateur doit cependant prendre note que dans le cas de certains réseaux hydrographiques importants, tel celui de la rivière Saskatchewan, il faut se reporter à plusieurs sections de l'Index.

Explication des titres de la table principale:

Nº de la station (Station No.):

Chaque station de jaugeage est identifiée par un numéro formé de sept caractères ou chiffres. Le système de numérotation des stations comporte tout d'abord la division du Canada en 11 groupes de bassins versants importants. Ces divisions sont ensuite réparties en fonction de l'altitude du sol à l'intérieur de la division; on utilise une lettre à cette fin. Chaque subdivision est ensuite partagée en fonction des limites du bassin versant; on utilise alors une autre lettre, p. ex. 5BD. Les stations qui s'y trouvent sont numérotées chronologiquement en fonction de la date de leur création, mais indépendamment de l'ordre qu'elles occupent sur le cours d'eau. Ainsi 05BD007 représente la septième station créée dans la sous-subdivision 5BD, et 11AA033 représente la trente-troisième station créée dans la sous-subdivision 11AA, ainsi de suite. On trouvera plus bas un index numérique des stations.

Nom (Name):

Chaque station a un nom qui est utilisé aux fins d'identification et de publication. Les noms précédemment utilisés n'apparaissent pas dans l'Index.

Superficie du bassin versant (Drainage Area):

On donne la dernière surface de drainage disponible, en kilomètres carrés, aux stations d'écoulement. Dans la majorité des cas, elle représente la superficie de drainage située en amont de la jauge. La jauge est normalement adjacente au tronçon de mesure des débits, et la même superficie de drainage peut être utilisée pour les deux. S'il s'agit d'une station située sur un lac, elle représente la superficie totale jusqu'à l'émissaire du lac.

Emplacement de la jauge (Gauge Location):

On utilise les coordonnées de longitude et de latitude. Il est possible d'obtenir une description plus détaillée de l'emplacement en s'adressant au bureau régional dont dépend la station. Dans les trois provinces des Prairies, on donne aussi le cadastre du quart de la division où se trouve la jauge. Cette description du terrain permet de situer la jauge à l'intérieur d'un carré d'un demi-mille de côté. Il a été nécessaire d'utiliser une abréviation, l'espace disponible étant limité; ainsi, SW22-05-08-W4 signifie carré sud-ouest 22, township 5, rang 8, l'ouest du quatrième méridien.

Discharge Records:

This gives the years for which discharge data are available, e.g. 55–66 indicates that discharge records were obtained during the period 1955 to 1966. If only miscellaneous discharge measurements were obtained for some years, this is identified by the sign =. If only stage (or water level) data are available, this is identified by an asterisk *.

The discharge records are listed in three rows, with space available for three periods in each row. A total of nine periods can be shown. For each period, the years for which discharge data are available are followed by symbols for the Type of Gauge, and the Operation, e.g. 55–66 RC.

Type of Gauge:

This indicates whether the records were obtained using a recording (R) or manual (M) gauge or whether records were obtained from a power plant rating (P).

The recording gauge gives a continuous record of water level on a graphical chart from which discharge records are computed.

Water level records are also obtained by an observer from a manual or non-recording gauge such as a staff gauge. For these stations, the one or more readings per day (or a graph through these readings) are assumed to represent the mean water level for that day.

If the type of gauge has changed during the period of record, more than one period will appear in the "Discharge Records" column with the appropriate "R", "M" or "P" annotation alongside.

Operation:

If continuous records are available, the symbol "C" will appear opposite the appropriate period shown in the "Discharge Records" column. If records have been collected on a seasonal or part-year basis, the symbol "S" is used. The exact period during the year for which seasonal discharge records are available may be found by examining the appropriate Surface Water Data or Historical Streamflow Summary publication. If discharge records have been collected only once a month or several times a year, but on a regular basis, the symbol "M" will be shown.

Remarks:

This column is used to indicate that special conditions exist at the station, or that specialized data are available. Twelve standard remarks are indicated where applicable. Nine of these remarks are coded by numbers, the other three by abbreviations.

1. *Data not Published* – this refers to hydrometric data which will not be published in either the annual Surface Water Data or the Historical Streamflow (Water Levels) Summary publications. These data are available from the appropriate Regional Chief upon request.

2. *International Gauging Station (in Canada)* – this refers to stations located in Canada.

Données disponibles (Discharge Records):

Les relevés indiquent les années pour lesquelles des données de débits sont disponibles, p. ex. 55–66 signifie qu'on a obtenu les relevés pendant la période allant de 1955 à 1966. Quand, pour certaines années, les mesures de débits sont très diverses, on le montre par le signe =. Et quand il n'y a que des données de hauteurs (ou de niveaux) de l'eau, on le dénote par un astérisque *.

Les relevés des débits sont présentés dans trois colonnes, chacune ayant un espace de prévu pour trois périodes. On peut ainsi insérer jusqu'à neuf périodes. Pour chaque période, on fournit les années où des données de débits sont disponibles, suivies par des symboles désignant le type de jauge et l'exploitation, p. ex. 55–66 RC.

Type de jauge:

On indique si la jauge utilisée était enregistreuse (R) ou manuelle (M), ou si on a obtenu les relevés d'une centrale hydro-électrique (P).

Les jauges enregistreuses fournissent un relevé continu du niveau de l'eau sous forme de graphique à partir duquel les débits sont calculés.

Les relevés de niveaux sont aussi faits par un technicien utilisant une jauge manuelle, une échelle limnimétrique par exemple. Pour ces stations, on suppose que le ou les relevés faits chaque jour, ou un graphique obtenu à partir de ceux-ci, représentent le niveau moyen de l'eau pour cette journée.

Si le type de jauge est changé pendant la période de relevé, on indique alors plus d'une période dans cette colonne, et chaque période est accompagnée du symbole approprié, «R», «M» ou «P».

Exploitation:

Si on dispose de relevés faits de façon continue, on accole le symbole «C» à la période correspondante décrite dans cette colonne. On utilise le symbole «S» si on a fait les relevés de façon saisonnière ou seulement pendant une partie de l'année. Il est possible d'obtenir la période exacte en consultant les *Données sur les eaux de surface* ou le *Sommaire chronologique de l'écoulement*. Si les données de débits ne sont recueillies régulièrement qu'une fois par mois ou à des époques déterminées de l'année, le symbole «M» est employé.

Remarques (Remarks):

On indique si des conditions spéciales prévalaient à la station ou si des données spécialisées sont disponibles. Il existe douze remarques «étalons»; neuf d'entre elles sont codées sous forme de chiffres et trois sous forme d'abréviations.

1. *Données non publiées* – données hydrométriques qui ne seront publiées ni dans les *Données sur les eaux de surface* ni dans le *Sommaire chronologique de l'écoulement* (des niveaux d'eau). On peut cependant les obtenir en s'adressant au chef régional concerné.

2. *Stations internationales de jaugeage (au Canada)* – stations situées au Canada.

3. *International Gauging Station (in U.S.A.)* – this refers to stations located in the U.S.A.

4. *Reservoir Contents Available* – this indicates that reservoir contents are available from the appropriate Regional Chief upon request.

5. *Water Quality Data Available* – this indicates that water samples have been obtained by the Water Survey of Canada, for analysis by the Water Quality Branch, Inland Waters Directorate, Department of the Environment, Ottawa.

6. *Sediment Data Available* – this indicates that sediment data have been gathered and are available upon application to the Director, Water Resources Branch.

7. *Satellite Data Collection Platform Installed* – this indicates that current hydrologic data are available by means of satellite telemetry, using GOES mode (Geostationary Operational Environmental Satellite) Data Collection System.

8. *Telemetering Device Installed* – this indicates that current hydrologic data are available by means of a telemetering device (other than a satellite DCP).

9. *Continuous Water Temperature Data Available* – this indicates that water temperatures have been obtained graphically from a recording gauge. These data are available from the appropriate Regional Chief.

Natural Flow or *Regulated Since 19 . .* – where the flow is known to be natural, this is indicated by "NAT". The flow of water in many river systems is affected by upstream regulation. In some cases, the extent of this regulation is not known and therefore is not indicated. However, where the regulation is known to be "appreciable", this is indicated as well as the year that the regulation began, if known, e.g. REG 37.

Data to 19 . . have been Reviewed – where the data for a station have been reviewed, this is indicated along with the year to which the review has been completed, e.g. REV 60.

Data contributed by ... – where the data for a station have been supplied in their entirety by an outside agency, a code for the name of this co-operating agency is given, e.g. DC 485. The codes and a list of the contributing agencies follows:

Data available from ... – where the data for a station have been collected by an outside agency, but are not supplied because they do not comply with Water Resources Branch National Standards, the data are available from the collecting agency upon request. The code for the name of the co-operating agency is given, e.g. AF390. The codes and a list of the co-operating agencies follows:

Code	Name
005	ABITIBI-PRICE INC.
010	ALBERTA DEPARTMENT OF THE ENVIRONMENT

3. *Stations internationales de jaugeage (aux E.-U.)* – stations situées aux États-Unis.

4. *Contenus du réservoir disponibles* – il est possible d'obtenir les contenus du réservoir en s'adressant au chef régional concerné.

5. *Données disponibles sur la qualité de l'eau* – des échantillons d'eau ont été prélevés par la Division des relevés hydrologiques du Canada pour analyse subséquente par la Direction de la qualité des eaux, Direction générale des eaux intérieures, ministère de l'Environnement, Ottawa.

6. *Données sur les sédiments disponibles* – des données sur les sédiments ont été recueillies. On peut les obtenir en s'adressant au Directeur de la Direction des ressources en eau.

7. *Donnees provenant de satellite* – il est possible d'obtenir des données hydrologiques habituelles par satellite limniphone en ayant recours au GOES (satellite géostationnaire opérationnel de l'environnement) Système de compilation des données.

8. *Limniphone* – il est possible d'obtenir les données hydrologiques habituelles par l'entremise d'un limniphone (à l'exception d'un satellite).

9. *Données sur la température de l'eau disponibles en continu* – les températures de l'eau ont été enregistrées sur graphique par une jauge enregistreuse. Il est possible de les obtenir en s'adressant au chef régional concerné.

Débit naturel ou *régularisé depuis 19 . .* – l'abréviation «NAT» dénote que le débit est naturel. Le débit de plusieurs réseaux hydrographiques est modifié par une régularisation qui est effectuée en amont. Il arrive parfois que l'importance de cette régularisation ne soit pas connue, et elle n'est donc pas indiquée. Cependant, quand on sait que la régularisation est d'une certaine importance, on l'indique ainsi que l'année où elle a débuté (si elle est connue), p. ex. REG 37.

Corrections apportées aux données jusqu'en 19 . . – on a révisé les données d'une station. La date indique l'année où on a terminé la révision, p. ex. REV 60.

Données fournies par ... – un organisme extérieur a fourni toutes les données d'une station. Chacun des organismes reçoit un numéro de code, p. ex. DC 485. La liste des noms et des codes des organismes ayant apporté leur collaboration suit:

Données disponibles à ... – un organisme extérieur a compilé toutes les données d'une station mais ne les a pas fournies parce qu'elles ne sont pas conformes aux normes nationales de la Direction des ressources en eau. Les données sont disponibles sur demande auprès de l'organisme compilateur. Chacun des organismes reçoit un numéro de code, p. ex. AF 390. Voici la liste des noms des codes des organismes ayant apporté leur collaboration:

REVISIONS

A number of corrections or revisions have been made to previously published data. Many of these were required because of typographical or computational errors which were exposed when daily discharges were stored on magnetic tape and monthly means were re-calculated by computer. Other errors were discovered or different interpretations of basic data were made during the systematic review of historical streamflow data presently underway, for example, these revisions may have been justified because a more reliable stage-discharge relationship had been developed.

Revisions to daily discharges or daily water levels are not published at present. However, those stations where a systematic review has been conducted are identified in the Surface Water Data Reference Index publication. The Historical Streamflow Summary publications contain revisions to monthly and annual mean discharges, and annual extremes of discharge. The Historical Water Levels Summary publications contain revisions to monthly and annual mean water levels, and annual extremes of water level. Recent revisions, corrections or additions made to the historical discharges and water levels are indicated by an "R" symbol in the summary publications. This "R" symbol is deleted from the data bank after publication of the summaries. Detailed information on revisions to historical data is available from the appropriate Regional Chief.

ACCURACY OF HYDROMETRIC DATA

The overall accuracy or the degree of reliability of hydrometric data referred to herein, depends upon

(1) The type of gauge, stability of gauge, accuracy of observation of stage and measurement of reference datum,

(2) The stability of the stage-discharge relationship; or if the control is unstable, the frequency and accuracy of discharge measurements, and

(3) The computation procedures and interpretation of records.

Because of all these variable factors, the number of significant figures used herein has been standardized for uniformity of presentation and does not reflect the degree of accuracy of the data. The Water Resources Branch standard for storing water level data is to three decimal points (0.001 m), although some contributing agencies provide data to two decimal points (0.01 m).

A measure of the reliability of the records can be made by an examination of the distribution of the symbols A, E and B (for discharge data).

RÉVISIONS

On a corrigé ou révisé beaucoup de données déjà publiées. Il a été nécessaire d'effectuer plusieurs corrections, car on a relevé des erreurs typographiques ou de calculs lorsqu'on a enregistré les débits quotidiens sur rubans magnétiques et qu'on a recalculé à l'aide d'ordinateurs les moyennes mensuelles. On a aussi relevé d'autres erreurs ou fait des interprétations différentes de données de base au cours de la révision rétrospective systématique des données de débit qu'on est à faire en ce moment. Ainsi, on peut justifier des corrections, par le fait qu'on ait trouvé une relation hauteur-débit plus sûre.

Les corrections apportées aux débits quotidiens ou aux niveaux d'eau quotidiens ne sont pas publiées, du moins pour le moment. Cependant, les stations où on a effectué une révision systématique sont identifiées dans l'*Index de référence des données sur les eaux de surface*. Les publications intitulées *Sommaire chronologique de l'écoulement* contiennent des données sur les moyennes mensuelles et annuelles des débits et sur les extrêmes annuels des débits qu'on a révisées. Les publications intitulées *Sommaire chronologique des niveaux d'eau* renferment les révisions apportées aux niveaux moyens mensuels et annuels ainsi que les extrêmes annuels. Les révisions et corrections apportées récemment aux débits chronologiques et aux niveaux d'eau sont accompagnées du symbole «R» dans les publications sommaires. Ce symbole «R» est omis de la banque de données après la publication des sommaires. On peut obtenir plus de détails sur les révisions en s'adressant au chef régional concerné.

EXACTITUDE DES DONNÉES HYDROMÉTRIQUES

La précision totale ou le degré d'exactitude des données hydrométriques dont on parle ici sont basés sur

(1) Le type de jauge, la stabilité de la jauge, la précision des observations sur les niveaux et de la mesure de la donnée de référence,

(2) La stabilité de la relation hauteur-débit ou, si l'élément régulateur est changeant, sur la fréquence et la précision des mesures de débits, et

(3) L'évaluation des procédés et l'interprétation des chiffres.

À cause de toutes les variables déjà mentionnées, on a normalisé pour des fins d'uniformité de présentation le nombre de chiffres significatifs, mais ceci ne réflète pas le degré d'exactitude des données. Dans la Direction des ressources en eau, les normes de cueillette des données sur le niveau des eaux sont de l'ordre de trois décimales (0.001 m), alors que certains organismes dans ce domaine n'exigent que deux décimales (0.01 m).

L'exactitude des données peut être appréciée par l'examen de la répartition des symboles A, E et B (pour les données de débits).

In general, data collected during open-water periods are more reliable than those collected during periods of ice conditions or those obtained by estimation. Further, water level data collected utilizing a water-stage recorder are more reliable and accurate than those using a manual gauge only, especially for small or flashy streams.

En général, les données recueillies au cours des périodes d'eau libre sont plus sûres que celles qui sont obtenues au cours des périodes de glaces ou par estimation. De plus, les données sur le niveau des eaux qui sont mesurées à l'aide d'un limnigraphe sont plus certaines et plus exactes que celles qui sont mesurées à l'aide d'une jauge manuelle seulement, surtout dans le cas de petits cours d'eau ou de cours d'eau à crues très rapides.
